

RightScale Premium Onboarding

Premium Onboarding Benefits

Experience & Expertise: Leverage the resources responsible for deploying more of the world's largest public, private, and hybrid cloud solutions than any other cloud integration team.

Best Practices: There is no one-size-fits-all approach to cloud management. We'll work with your team to adapt our proven best practices for building scalable, automated, and manageable cloud environments to your needs.

Rapid Deployment: Tight timelines? No room for decision-making thrash? Customers who use Premium Onboarding deploy their applications faster and more successfully.

About RightScale

RightScale is the leader in cloud computing management. Founded in 2006, the company offers a fully automated cloud management platform that enables organizations to easily deploy and manage business critical applications across multiple clouds with complete control and portability.

Successfully Deploy Your Applications to the Cloud

RightScale Premium Onboarding provides you access to planning and advisory services from the most experienced cloud solutions engineers in the industry to ensure that your cloud project is successful. Whether you are new to cloud, expanding to a new cloud, or just want an architectural refresher, Premium Onboarding enables you to meet your project goals and timeline by following a set of best practices that we have developed over the last five years. Premium Onboarding delivers highly customized advisory services, including project scoping, planning, testing and launch support, without the overhead and cost of an outsourced, hands-on engineering engagement.

The Premium Onboarding Process

The Premium Onboarding process begins with the RightScale Onboarding Team comprised of named resources, including a RightScale Solutions Architect, Integration Engineer and Project Manager, to scope the project with you. The Onboarding Team delivers a custom, application-specific reference architecture and step-by-step work plan to address the full scope of using RightScale to manage public, private, and hybrid cloud resources. This is where you get your hands dirty and start to build. We assist you along the way by leading project scrums and providing testing guidance. Prior to launch we offer go-live support, including a pre-launch deployment review health check and best practices evaluation. On and after launch day, our support team will assist you according to your desired service level.

Scoping & Design
